In the Specification

[0102] The term "computer-readable medium" as used herein refers to any medium that participates in providing instructions to the network 2 for execution. Such a medium may take 5many forms, including but not limited to, non-volatile media, volatile media, and transmission media. Non-volatile media includes, for example, optical or magnetic disks, such as storage device 10. Volatile media includes dynamic memory. Transmission media includes coaxial cables, copper wire and fiber optics. ~~Transmission media can also take the form of acoustic or light waves, such as those generated during radio-wave and infrared data communications.~~
